Job Title	Rig Mechanic
Location	Remote Field Location
About the Role	Purpose DM Interim Management (PTY) LTD is currently hiring a Skilled Rig Mechanic for our client operating in the oil and gas sector in Namibia. This role is ideal for experienced professionals with hands-on expertise in maintaining and troubleshooting motors, air compressors, generators, and valves on onshore drilling rigs. Key Responsibilities: • Motors: Operate and maintain various types of motors (AC and DC). Troubleshoot electrical issues, perform routine inspections, and manage motor controls, including Variable Frequency Drives (VFDs), and safety protocols. Experience with various sizes and types of drilling machinery powered by motors. • Air Compressors: Operate and maintain rotary screw and reciprocating air compressors. Understand of pneumatic systems and their applications in drilling operations. Conduct routine maintenance, including inspections, oil changes, and filter replacements. Troubleshoot air supply issues and system failures effectively. • Generators: Operation and maintenance of diesel and gas generators, ensuring optimal performance. Knowledge of electrical distribution and load management on the rig. Perform routine testing and inspections, as well as emergency response to generator failures. Understanding of generator synchronization and power management systems. • Valves: Installation, operation, and maintenance of different types of valves (gate, globe, ball, and check valves). Knowledge of valve specifications, materials, and pressure ratings relevant to drilling operations. Skills in analyzing valve performance, and conducting required repairs or replacements. Experience with valve automation, instrumentation, and control systems. • Maintenance & Repair: Oversee the maintenance, repair, and troubleshooting of all mechanical systems and equipment on the rig. • Regular Inspections: Conduct regular inspections of machinery to ensure compliance with safety and operational standards. • Documentation: Document maintenance activities, prepare reports, and maintain accurate records of repairs and equipment status. • Project Support: Participate in rig mobilization and demobilization processes, providing mechanical support during transitions. Participate in project planning and execution, providing input on mechanical operations to support overall project objectives. • Emergency Response: Assist in emergency response planning and execution as it pertains to mechanical systems.
